[AI] Promote the canary build

Artifact kind: Recommendation
Source: Release advisor
Source mode: Advisory draft
Confidence: 86%

Why
Traffic and error budgets have stayed healthy long enough to make the canary promotion a reviewable next step.

Evidence
- Error rate — 0.02% across the last 15 minutes
- Latency — p95 stayed below 110ms in both canary regions
- Capacity — queue depth remained under 12 during peak traffic

Governance
A release owner must confirm the recommendation before production promotion.

Next action
Promote the canary ring to the full production rollout after human review.
