Setup Prepare the staging rollout

Owner: Platform ops
Window: Today

Keep the operator on one calm path instead of scattering the sequence across notes, drawers, and status rows.

Steps

1. Done: Review rollout health - Canary latency and error budget are both healthy.
2. Now: Refresh the staging secret - The existing token expires in 30 minutes.
3. Next: Promote the rollout - Only after the new secret is confirmed.

Why

The rollout is healthy, but the expiring token makes the current path fragile until rotation is complete.

Operator note

Keep the guidance advisory until the rotated secret is confirmed in the deployment logs.

Next action

Open the staging secret manager and rotate the deployment token.
